

Regarding the PLC and the RF energy it will produce. I am an amateur radio operator. I also subscribe to the internet via telephone line. I do live in an area not served by broadband / highspeed hookup. As much as I would like to this type of service, I would not want to give up HF amateur radio frequency or have the interference PLC would cause. I urge you to make sure that the technology used will protect and preserve the amateur radio spectrum. Thank you!
